OUR HISTORY

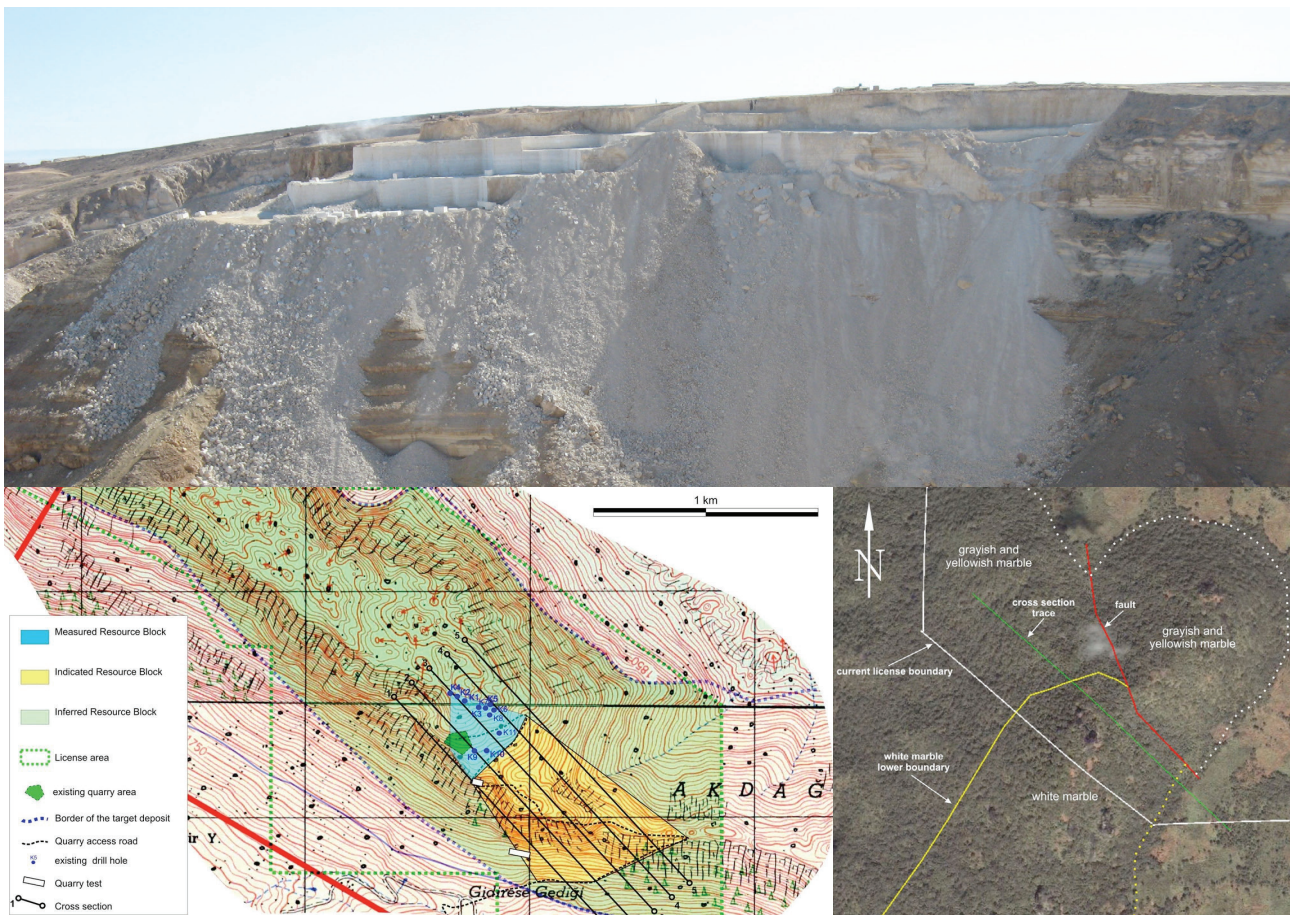

The company has been incorporated on September 2006, as natural evolution of the professional activity of some freelance geologists, operating under the same company name since 1987.

Since the beginning of its activity the firm has worked all over the world helping the clients in the exploration of new deposits for dimension stones, industrial minerals and precious metals.

Our activity

Today Geofield is a mature firm with a lean and flexible organization. The experience of our geologists, geophysicists and mining engineers covers all the aspects related to the identification, evaluation and exploitation of a stone or mineral deposit and let us to conduct mining studies of all levels, from feasibility studies to preliminary economic assessments, scoping and conceptual.

OUR SERVICES

EXPLORATION INVESTING IN ITALY STRATEGIC ADVISORY SERVICE MINE PLANNING

EXPLORATION

Geofield offers the most effective methods to generate new exploration targets and identifying potential deposits. This way our customers find their best opportunities and make informed decisions.

- Our exploration team's ability is to organize and integrate information and data sets coming from all the exploration levels, such as:
- Field mapping and analysis of drill-hole data
- Structural analysis
- Geochemistry soil sampling
- Local and regional GIS compilation
- Geophysics: induced polarization, resistivity and magnetic survey
- 3D models of the distribution of lithology and alteration haloes
- Chemical microanalysis

INVESTING IN ITALY

The Geofield team of experts provides specific technical and legal assistance at all levels, from scoping to Feasibility studies, to support potential investors in the Italian mining sector.

- Some of the firm activities can be summarized in:
- Screening on environmental and landscape constraints or protected areas
- National and regional mining rules and regulations
- National and regional environmental and safety regulation
- Regional mining planning
- Restrictions for mining exploitation
- Subjects formally involved in the licensing procedures
- Duration and articulation of the administrative procedures
- Geological and mining database
- Identification of potential customers and partners
- Preliminary assessment, Pre-feasibility and Feasibility studies
- Monitoring of local, national or European funding opportunities

A close-up photograph of a person's hand, adorned with a dark leather watch and several silver rings, resting on a highly textured, reddish-brown marble surface. The marble has intricate veining and patterns. The hand is positioned in the upper right corner of the frame, with fingers slightly spread. The overall lighting is warm, highlighting the textures of both the skin and the stone.

STRATEGIC ADVISORY SERVICE

- An accurate and well-defined geological model can bring to a reliable resource estimation and this eventually could guarantee the technical and economic viability of your mining project. Conversely, the poor understanding of the geological aspects will certainly expose your project to great risks.
- We start from the solid base of a well-assessed geological knowledge. Moreover, our staff, covering all the aspects of the mining business, and our internationally recognized Competent Persons, have the skills to accurately identify and evaluate technical and financial risk.
- To mitigate the risks and expand the opportunities related to your project we provide the following services:
- Preparation of Independent technical reports (also as a support for IPO).
- Technical audits
- Code compliant reporting (JORC, NI43-101, etc)
- Technical Due diligence preparation and reviews
- Risk quantification
- Strategic planning and critical project decisions

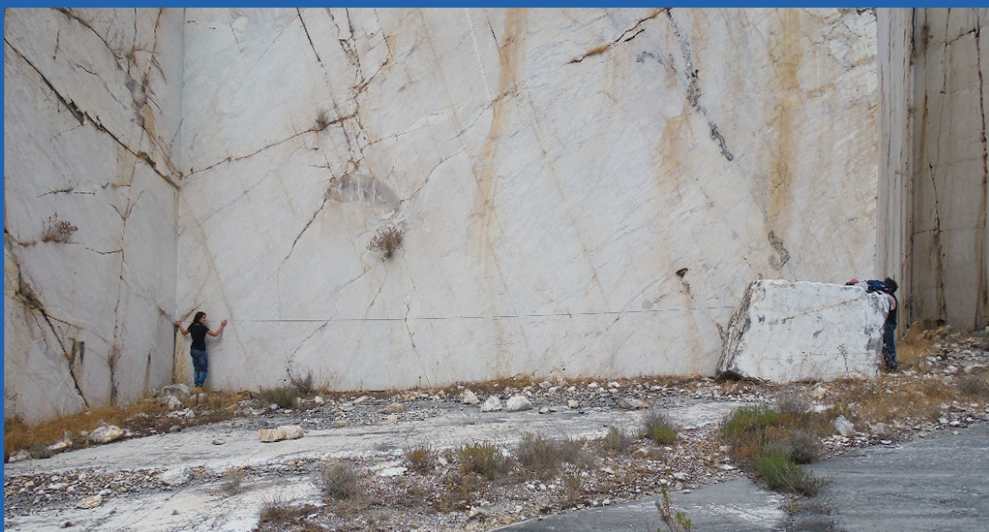

MINE PLANNING

- Geofield is a specialized consultancy company that provides the know-how to start a new mine project or optimize the efficiency of an existing one. To achieve the long term cost-effectiveness and mitigate risk we focus in reconciling the deposit complexity and the mining and processing operations.
- To achieve this goal, we provide the following services:
- Spatial distribution of the ore and its in-depth characterization: from design to supervision and model building.
- Feasibility and pre-feasibility studies
- Short to long-term mine planning
- Life-of-mine planning
- Startup quarry management training
- Training of mine personal
- Tailored mine scenario simulations
- Resource optimization
- Environmental and rehabilitation planning
- Optimizing the cost/productivity ratio

SPECIAL COMMITMENTS

In the last years Geofield has provided its services for many start-up mining companies and SMEs, adding value to the core business activities of the clients by understanding their value chain and processes.

The firm is specially active in international projects in emerging countries to enhance economic and social condition of local communities throughout the mine exploitation of natural stones and precious metals.

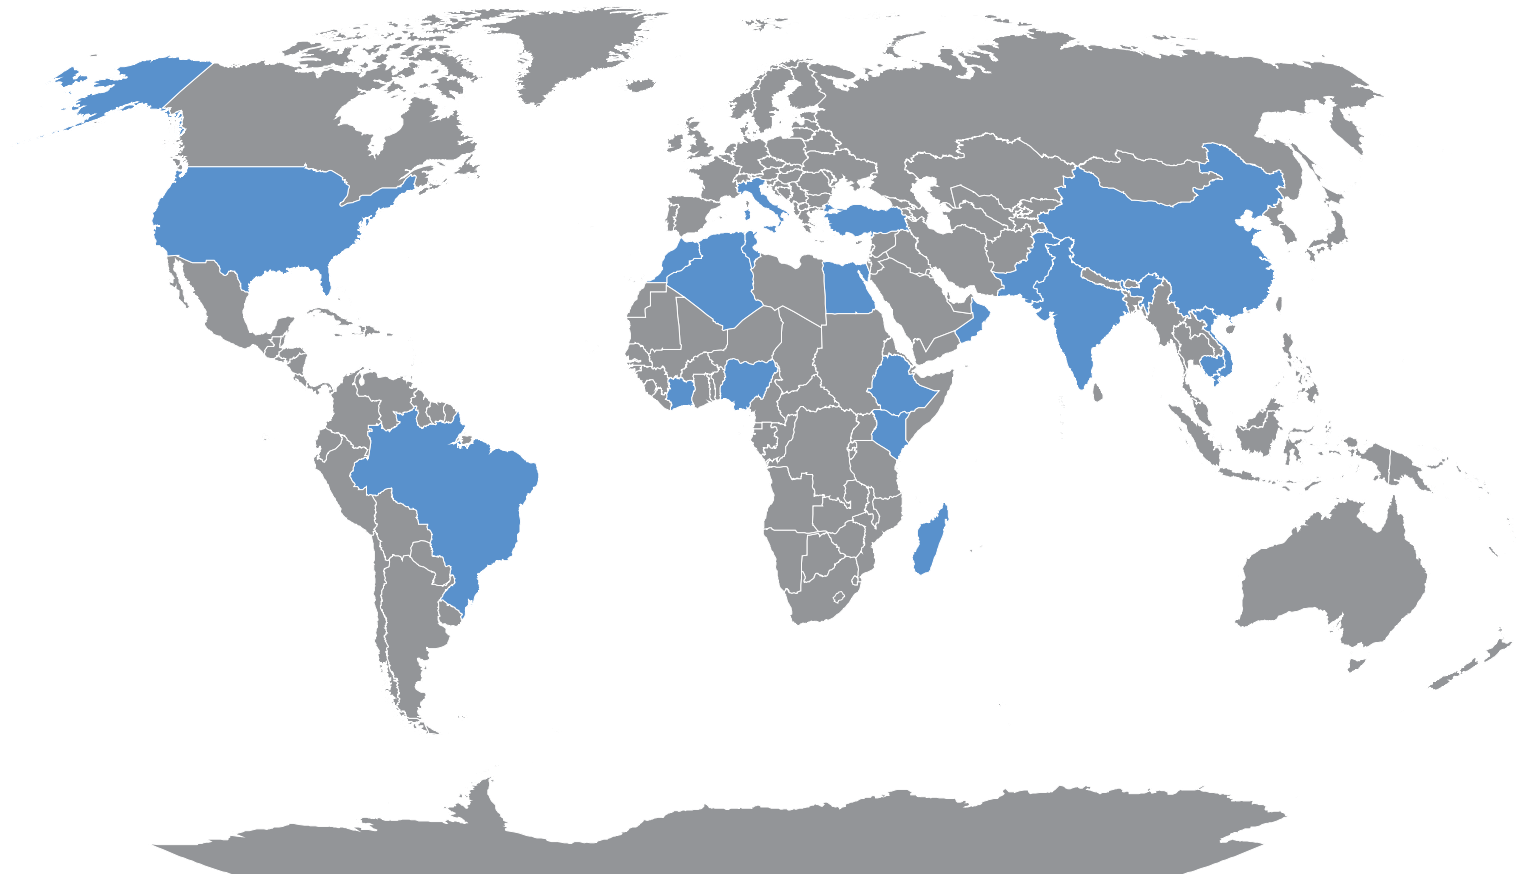

GEOFIELD IN THE WORLD

Geofield is an independent fully private company operating all over the world in the field of georesources. Our mission is providing high quality advice and innovating services during all the stages of mine life in order to maximise the potential of our client projects.

Together with our marketing experts, we support our clients with market and sensitivity analysis for the promotion of the final product worldwide.

We help our clients to mine smarter and increase their business, offering individual specialists or complete teams for short and long term assignments.
